

winflow

winHood | w1

WinHood-W1 has primarily been designed for centralized systems of exhaust ventilation in multi apartment buildings. Because of the connection size of the hood, it can be used in decentralized ventilation systems also if pressure level in duct system is sufficient.

The W1 is part of the Winflow's design hood- collection. It is visually elegant and light looking, combining stainless steel and bended glass. W1 is also very user friendly and easy to install on the wall.

Interface of the hood is stainless steel being resistant against cooking circumstances. It includes electrically functioning open-close-mechanism used with a button. Status of the hood is shown by led. Light-function operates similarly. W1 is available 600 mm wide.
